# Genetics of uveal melanoma

Genetic factors participate to the onset of uveal melanoma. These genetic factors include high penetrance risk mutations, accounting for familial cases, as well as low penetrance risk variants, accounting for contrasted incidences of the disease in various human populations. I will address some of the recent progresses in both high and low penetrance risk factors, which highlight the underestimated role of these predisposing factors.

**Invited by:** The Uveal Melanoma Medico-Scientific Program, Institut Curie  
**Contact:** [leanne.de-koning@curie.fr](mailto:leanne.de-koning@curie.fr)

**Friday, January 16<sup>th</sup> 2025**

**5:00 pm CET (11:00 am EST; 8:00 am PST)**

**Institut Curie, Amphitheater Burg, 12 rue Lhomond, Paris**

**The seminar will be broadcast [online via Teams](#)\***
